Press Release

February 12, 2007 Eastpointe, MI

Alternate Energy Solutions Signs Wind Energy Lease and Development Agreement in the Midwest.

Alternate Energy Solutions has signed a surface lease agreement for wind exploration and wind farm development on ranchland property in the Midwest. The Company has been working in the Midwest for the past three years. The states of Idaho, North Dakota, South Dakota, Wyoming and Montana have good wind resources that could potentially be developed into small or large wind generating facilities for use by federal agencies, municipalities, hospitals, schools and industry (both utility and non-utility sectors).

The details and terms of the agreement are not being released to the public, at this time. Management believes the contract to be equitable and mutually beneficial. The lease is for property greater than one thousand acres. Meteorological testing at two locations is scheduled to begin within the next 90 days.

The lease provides the Company with the right and privilege to first study the wind resource on ranchland held in trust, by a prominent and humble Midwest family. Alternate Energy Solutions will further evaluate environmental impact, economic sensitivity and other issues relevant to project feasibility. Transmission and interconnection reviews for possible tie-in with the Western Area Power Authority (WAPA), the Midwest Independent System Operator (MISO), local Load Serving Utilities (LSUs), Rural Electrical Cooperatives, value-added agricultural use, mining and telecommunication applications, and open-market wholesale and bi-lateral purchase agreements will be conducted as well.

In addition to investigating the sale of electrical energy, we will begin sourcing opportunities for sale of Renewable Energy Certificates (RECs) under bundled, unbundled, and forward financial transactions. Alternate Energy Solutions welcomes all serious inquiries from governmental and non-governmental entities seeking wind-based renewable generation attributes and energy. Parties interested in acquiring renewable wind energy, located either in- or out-side the state of Michigan, are encouraged to contact the Company.

Alternate Energy Solutions is a Michigan company specializing in development of renewable energy utilizing wind turbines, solar thermal collection and geothermal systems. Company services to clients include fatal-flaw analysis, wind testing and mapping, electrical system design and component specification, system operation, training and maintenance.
