Press Release

Thursday, April 21, 2005 Warren, MI

Alternate Energy Solutions hosts Second Annual Conference – Opportunities to Save with Renewable Energy.

Today, Alternate Energy Solutions hosted educators, municipal officials and agricultural representatives at an all day conference focusing on the use of wind turbine technology, to generate electricity for schools, municipal and government agencies, and farming communities. Presenters included Dr. Rick Stoeker, Superintendent of Bureau Valley School District, Joe Bennett from Michigan Electric Transmission Company (METC), Tom Stanton of the Michigan Public Service Commission (MPSC), Kip Davison from Kalamazoo Public Schools, Jane Rigby, Vice-President of Cantor Fitzgerald CO2e.com, Tom Waters from Frazer, Trebilcock, Davis & Dunlap, and John Cavanaugh, Vice-President Municipal Financing, of Comerica Securities.

Commenting on the conference, Alternate Energy Solutions' president John Wolar said, "The number of conference participants exceeded expectations. We are impressed with the number of people that traveled from Michigan, Ohio, Indiana, Illinois and Canada to learn about our company and better educate themselves on the benefits of wind energy. I believe individuals were especially interested in that fact that wind generated electricity can be integrated with conventional steam boiler systems to reduce heating expenses. It also seems appropriate, that on this day, 3 pieces of legislation were introduced in the Michigan State House of Representatives relating to wind power, namely HB 4647, HB 4648, and HB 4649.

"We are grateful to the Michigan Farm Radio Network (MFRN) for covering the event. A number of our conference presenters have been interviewed by MFRN, the interviews will be posted to our website for public review."

Alternate Energy Solutions is a Michigan company specializing in development of renewable energy utilizing wind turbines, solar thermal collection and geothermal systems. Company service to clients includes wind testing and mapping, electrical system design and component specification, system operation, training and maintenance.
