Press Release

July 21, 2007 Norton Shores, Michigan

Wind meteorological study to begin on west coast of Michigan

Management would like to report that Alternate Energy Solutions has been retained, by Nugent Sand Mining Company, as a consultant, to measure wind resources along Lake Michigan. The company will install two meteorological towers, for a period of one year. The function of the towers will be to measure wind speed, wind direction, temperature and barometric pressure. We expect that both towers will be erected and begin monitoring by August 6, 2007.

Approval for the installation was received from the local community earlier last month. The purpose for the study is to evaluate the wind resource in the region.

Additional information may be obtained from news reports by the Muskegon Chronicle.

Alternate Energy Solutions is a Michigan company specializing in development of renewable energy utilizing wind turbines, solar thermal collection and geothermal systems. Company services to clients include fatal-flaw analysis, wind testing and mapping, electrical system design and component specification, system operation, training and maintenance.
